Presentation Outline

Development of the San Bernardino County Transportation Analysis Model

- Project Background
- Technical Approach
- 2008 Model Validation
- 2035 Future Year Forecast
- Conclusion

PROJECT BACKGROUND

Project Background

Development of the San Bernardino County Transportation Analysis Model

- RIVSAN model is no longer functional and still retained the same essential SCAG model structure from the early 1990s.
- Advanced functionalities have been incorporated into the SCAG regional model in the last decade.
- Consolidating all modeling efforts into one county-wide model is highly desirable.
- Maintain consistency throughout the County and with the remainder of the SCAG region.

TECHNICAL APPROACH

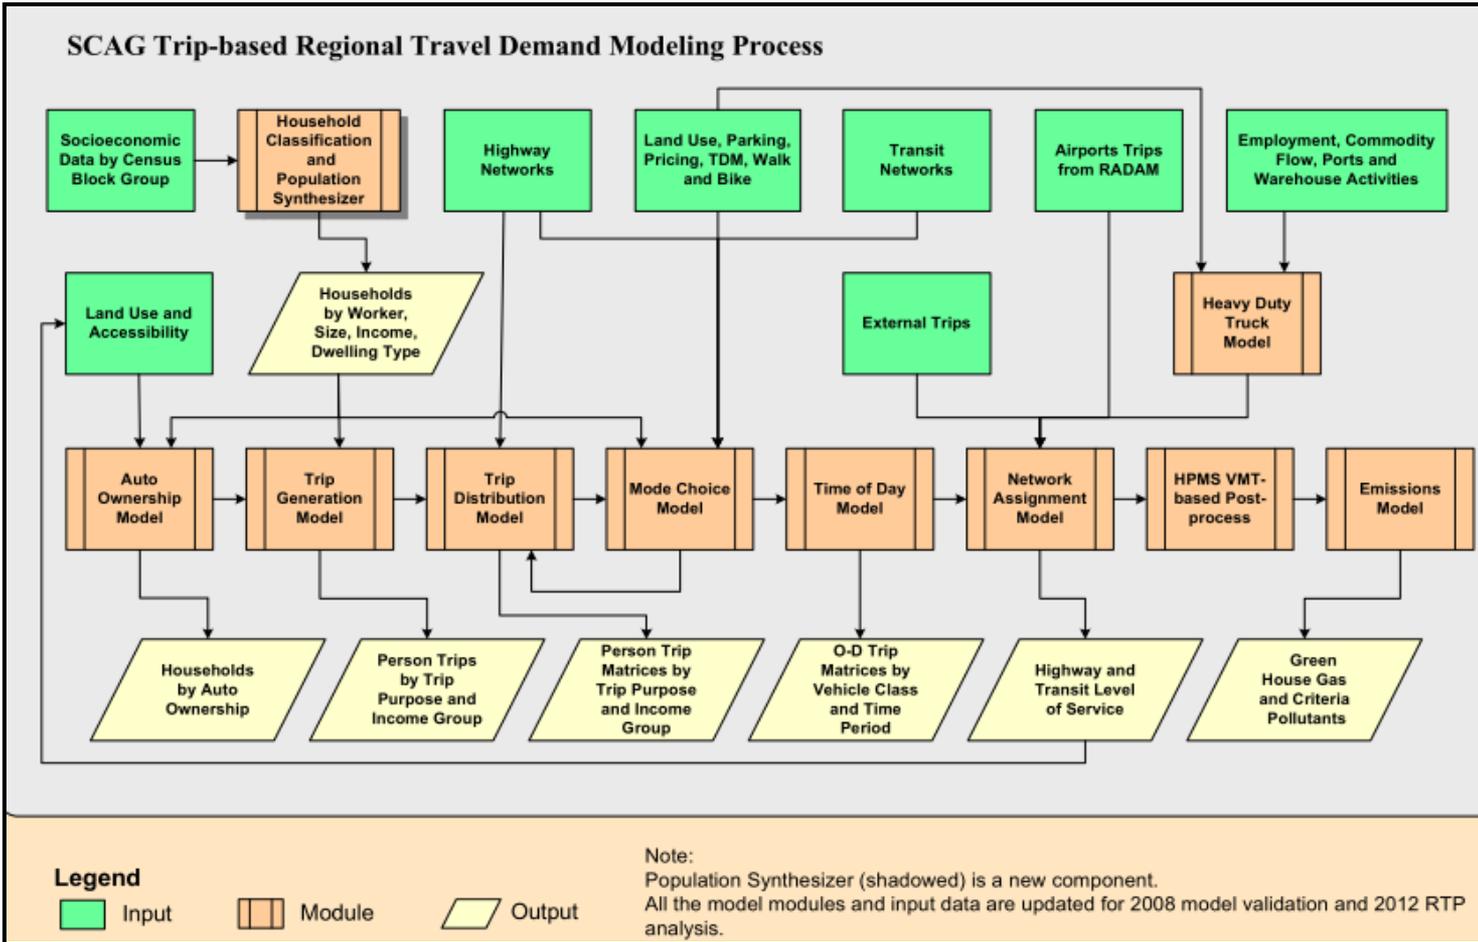

Technical Approach

Development of the San Bernardino County Transportation Analysis Model

- SBTAM is a focused version of the SCAG regional model.
- Build upon the SCAG TransCAD version 5 model with additional features:
 - Trip generation model, including the new HBW trip production and vehicle availability models, etc.
- This model was developed using SCAG's Subregional Model Development Tool (SMDT).

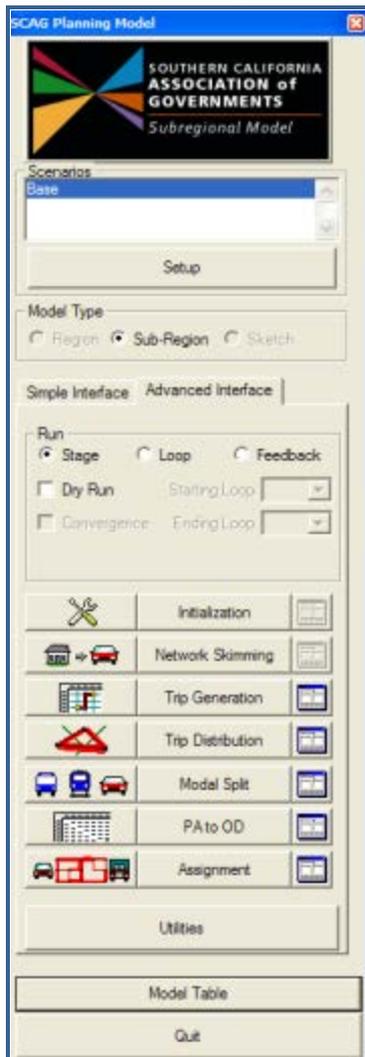

SCAG Modeling Process

Development of the San Bernardino County Transportation Analysis Model

Development of SBTAM

Development of the San Bernardino County Transportation Analysis Model

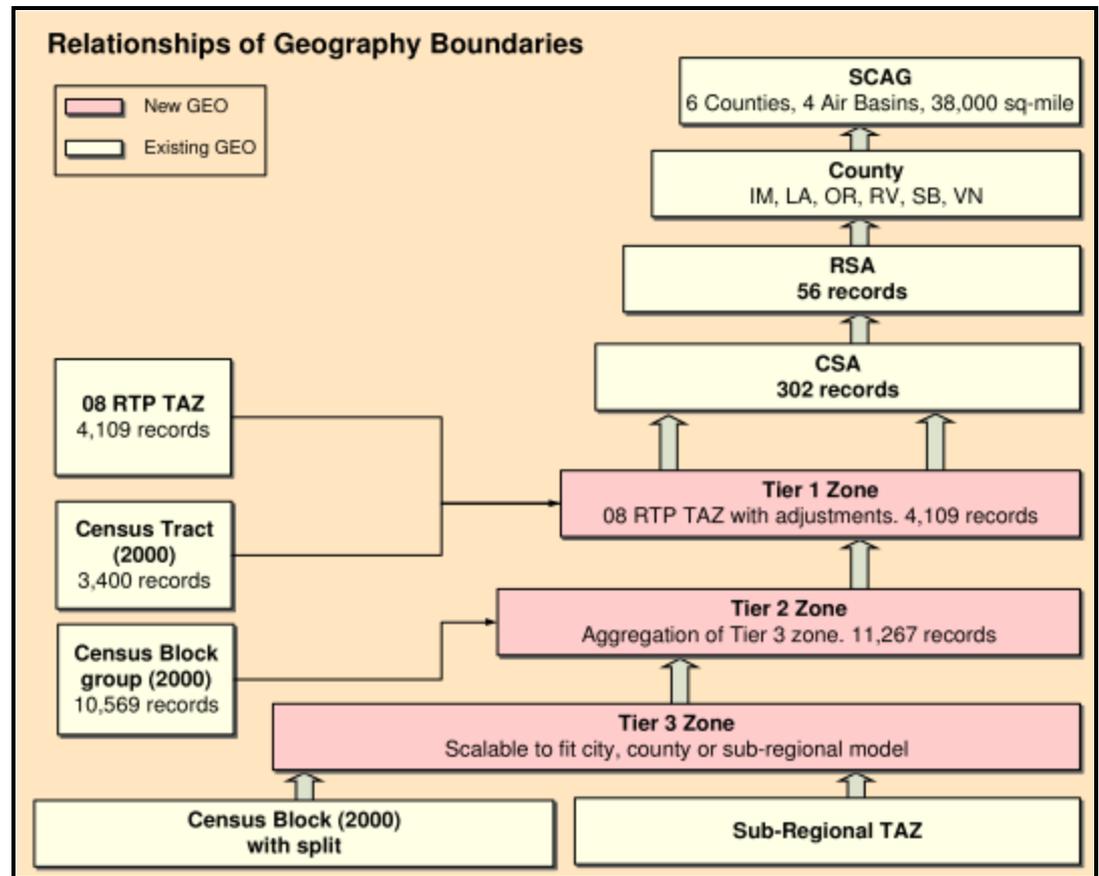

- SMDT can effectively develop a subregional model based on the SCAG version 5 regional model
 - Auto-disaggregates and aggregates TAZ attributes, or based on inputs from sub-region agency
 - Auto-disaggregates and aggregates matrix inputs
 - Auto converts networks and creates new centroid connectors, or based on existing definitions

Tiered Zone Structure

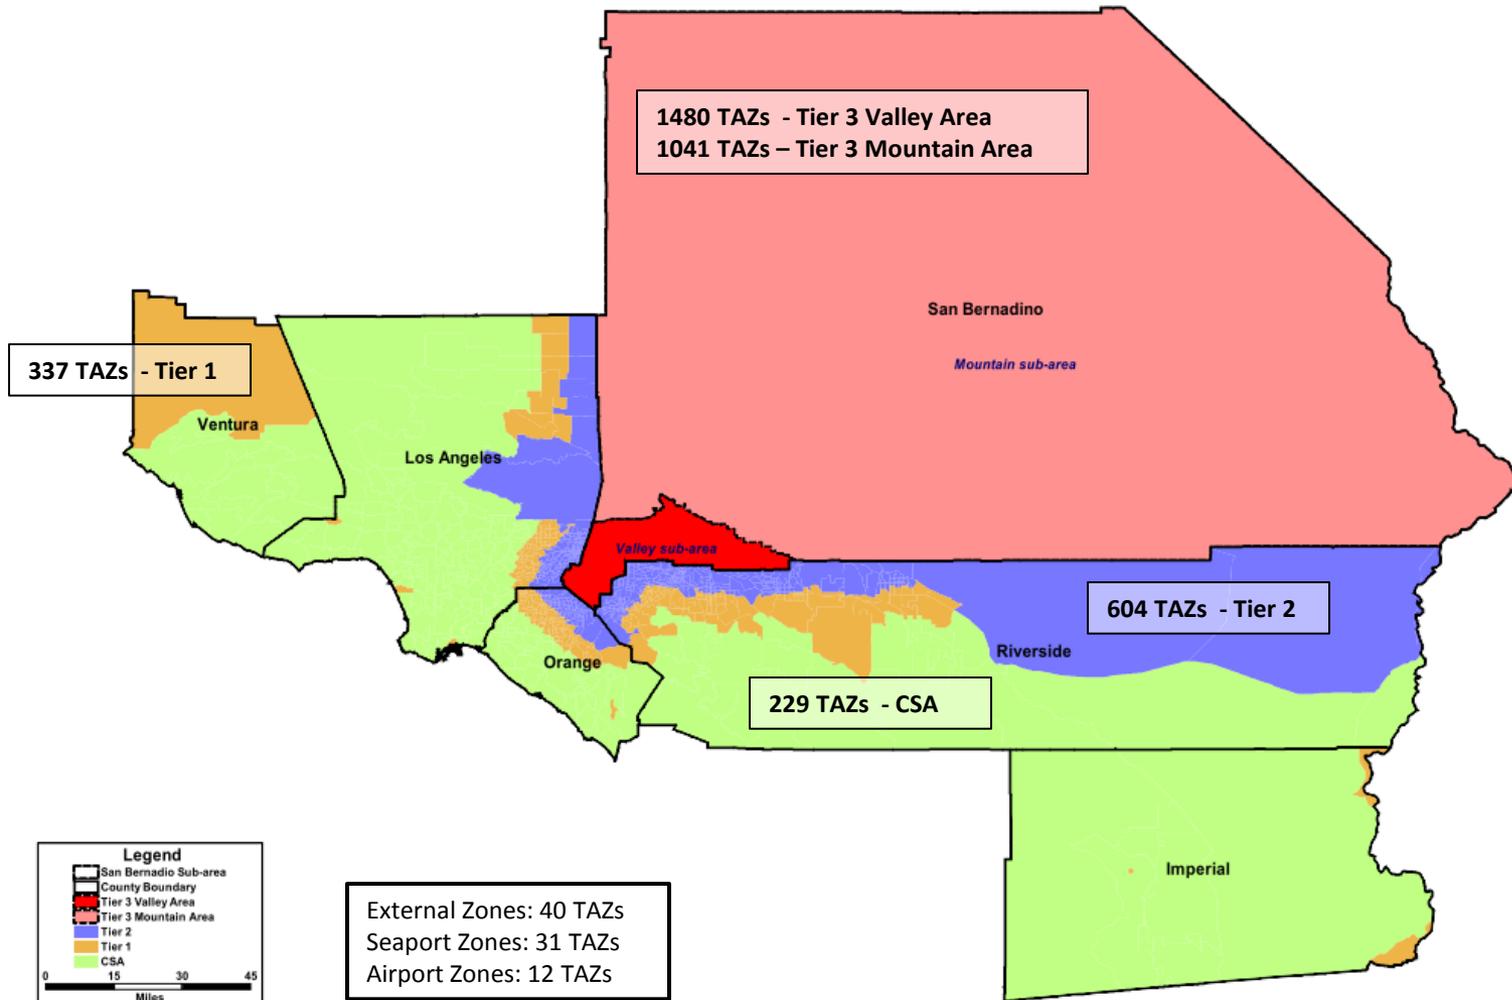

Development of the San Bernardino County Transportation Analysis Model

- To enhance the precision of the micro-level land use and smart growth analysis

Tiered Zone Structure in SBTAM

Development of the San Bernardino County Transportation Analysis Model

2008 MODEL VALIDATION

2008 Model Validation

Development of the San Bernardino County Transportation Analysis Model

- Trip Generation
- Trip Distribution
- Mode Split
- Trip Assignment

Trip Generation – Daily Prod. and Attr.

SBTAM Vs. SCAG Model

Mode Split

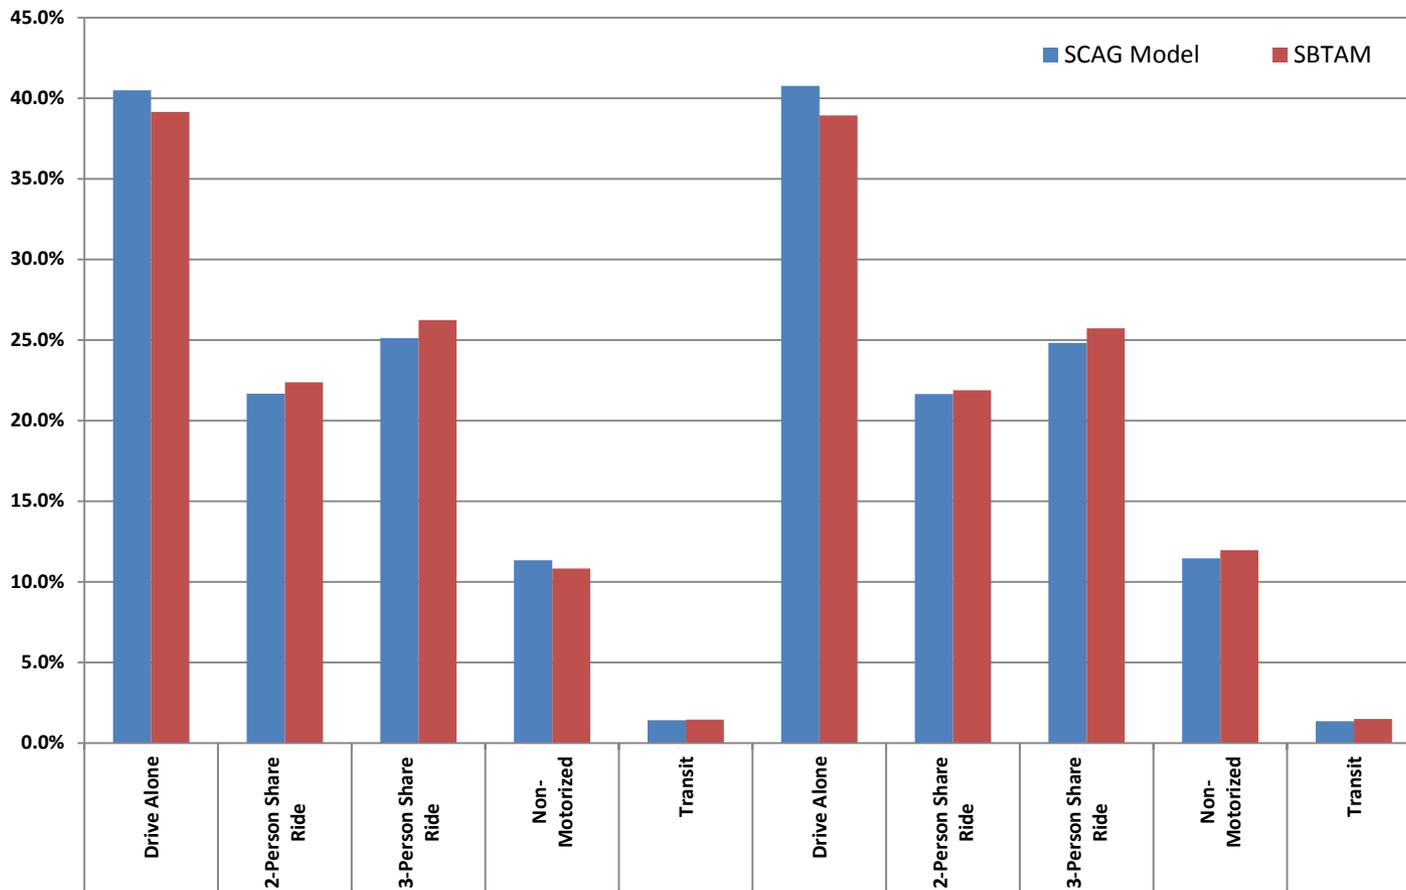

Development of the San Bernardino County Transportation Analysis Model

- Mode shares estimated from SBTAM are not consistent with the SCAG model results
 - Non-motorized and transit mode shares estimated from SBTAM are significantly higher than the mode shares from SCAG model, at the expense of auto mode shares.
 - Due to the highly dense zone structure in the San Bernardino County, the accessibility of non-motorized modes and transit modes are significantly increased.
- Shift trips between modes at the county level to match SCAG mode shares.

Daily Mode Share Comparison

SBTAM Vs. SCAG Model

Development of the San Bernardino County Transportation Analysis Model

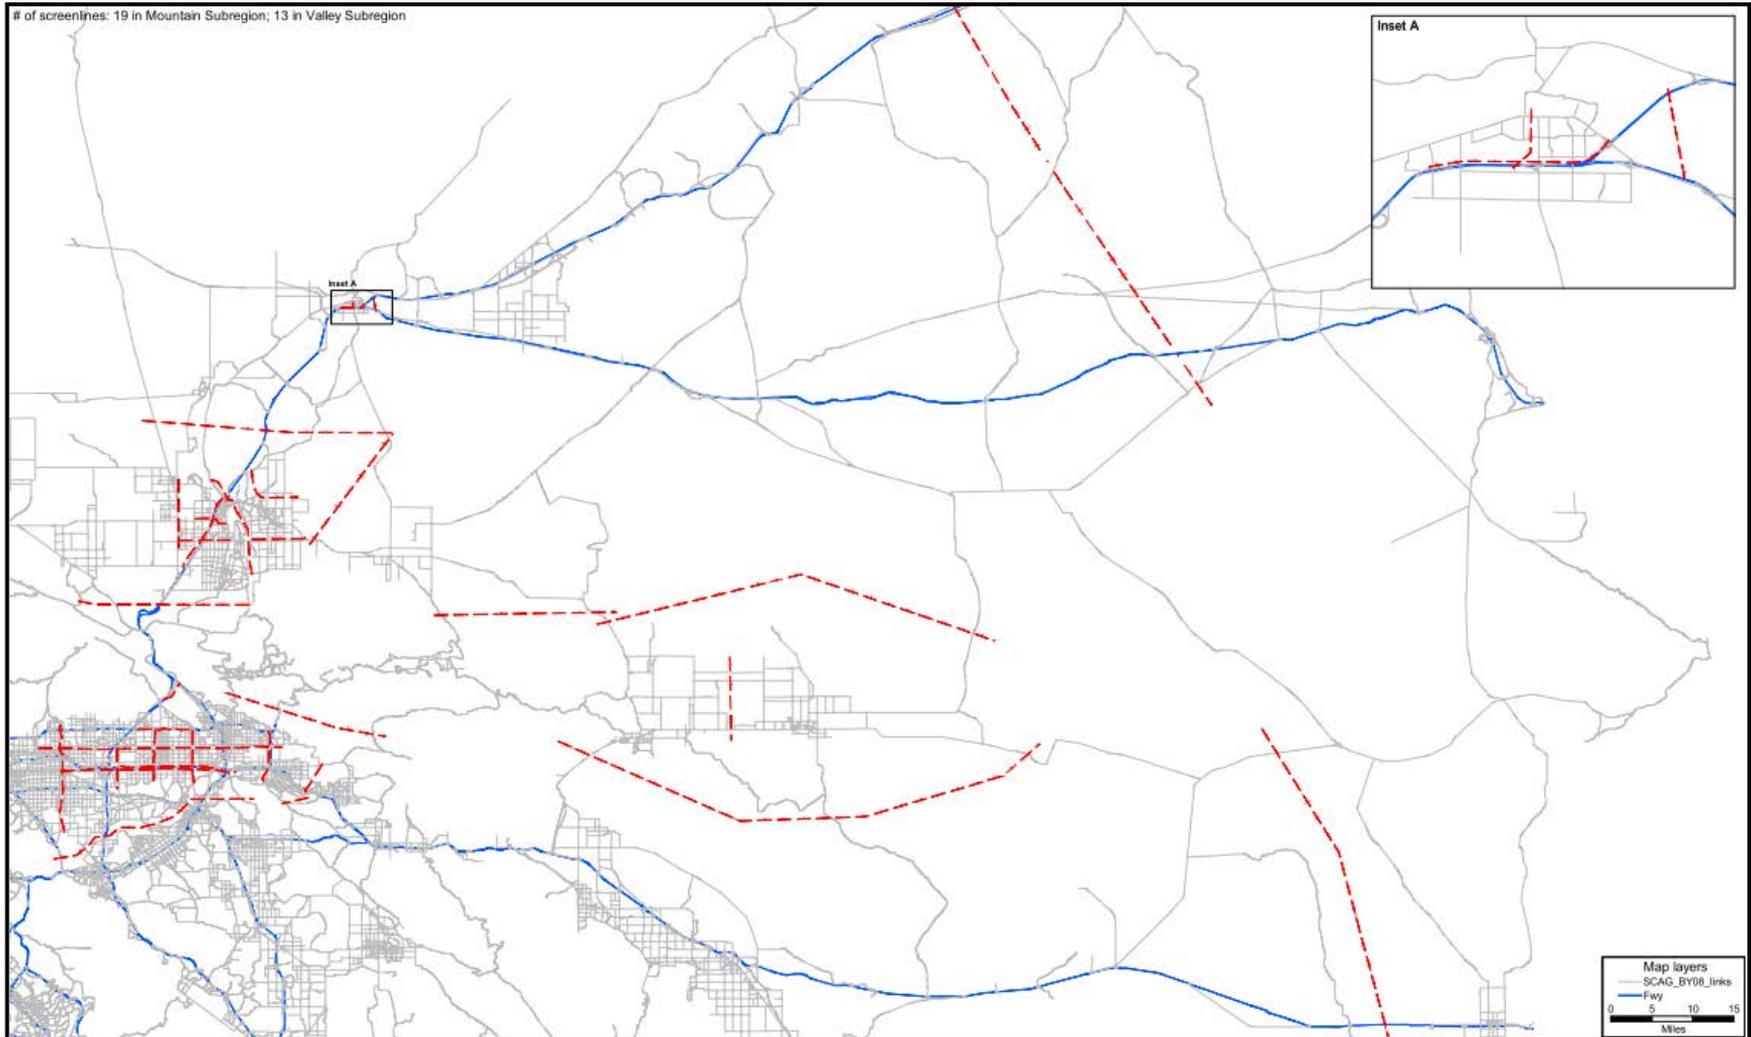

Screenline Traffic Count

Development of the San Bernardino County Transportation Analysis Model

- Screenlines are developed to validate the model.
 - 13 screenlines in Valley with 44 freeways, 8 HOVs and 200 arterials
 - 19 screenlines in the Mountain & Desert area with 22 freeways and 84 arterials
- Collect existing traffic counts from different agencies
- Collect traffic counts on-site
 - 49 count locations in Valley
 - 28 count locations in Mountain/Desert

Screenline Locations

2035 FUTURE YEAR FORECAST

2035 SCAG Model Update

Development of the San Bernardino County Transportation Analysis Model

- SCAG version 6 model has been significantly updated compared to version 5 model, the base model to develop SBTAM.
 - Different zone structures
 - SCAG V5 model uses Tier 1 zone structure
 - SCAG V6 model uses mixed zone structures
 - Tier 1 zone structure: Time of day and assignment models
 - Tier 2 zone structure: Skimming, trip generation, distribution and mode choice
 - Different toll procedure
 - Significant enhancement in each model step
 - Trip Generation, distribution, mode split and assignment

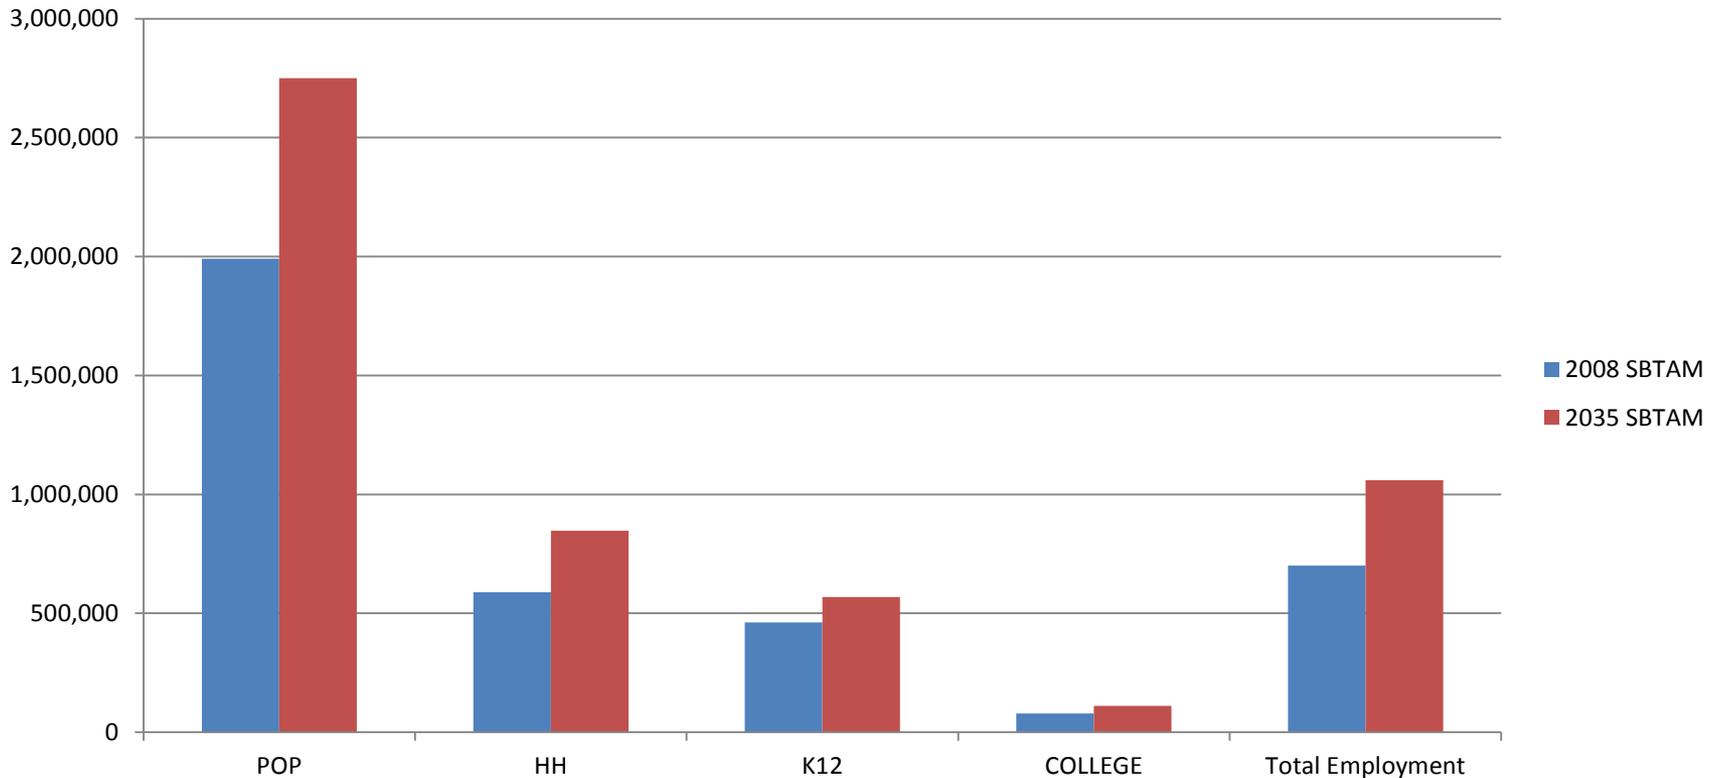

Development of SBTAM Future Scenario

Development of the San Bernardino County Transportation Analysis Model

- Use the highway/transit networks in SCAG V6 model, including projects adopted in the 2012 RTP.
- Network Update:
 - Highway Network: centroid connector, toll facility, and other project-related updates
 - Transit Network: transit route update, transit mode revision to be consistent with the definition in SCAG v5 model
- Tables and matrices conversion between zone structures

San Bernardino SED Growth

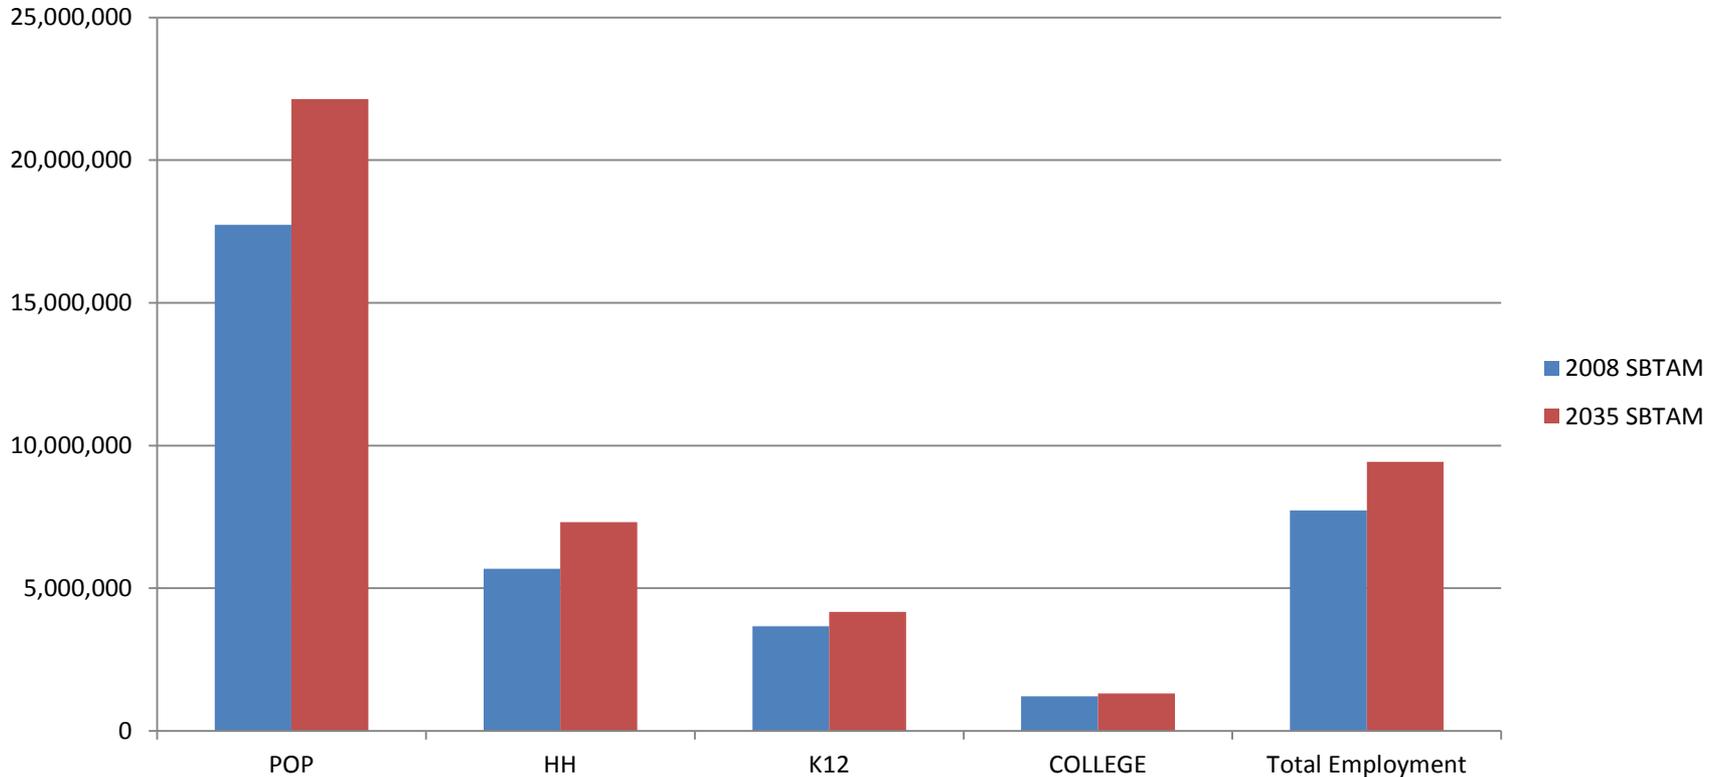

Development of the San Bernardino County Transportation Analysis Model

| SED | Population | Household | K12 | College | Total Employment |
|-------------------|------------|-----------|-------|---------|------------------|
| SB County Growth% | 38.2% | 43.9% | 23.0% | 41.0% | 51.2% |

CONCLUSION

Conclusion

Development of the San Bernardino County Transportation Analysis Model

- SBTAM incorporates most of the enhancements of the SCAG regional model in the last decade.
- SBTAM can be used in a wide range of analyses
 - Policy analysis,
 - Freeway/Arterial segment and corridor study
 - Interchange development, etc.
 - Impact analysis of new development and general plans

Conclusion

- Next Step
 - A detailed mode choice calibration can be done if there are enough observed data to support it.
 - Validation at the transit side.
 - Move to SCAG V6.

THANK YOU!
